Meridian x Nordfracht

Customer case study. Hamburg, 3 sites, ~400 truck movements per day.

The situation

Nordfracht GmbH is a Hamburg-based freight forwarder with three warehouse sites and roughly 400 truck movements per day. Before Meridian, dock coordination ran on three dispatchers with two phones each, one paper notebook and a WhatsApp group of about 60 drivers. Sixty percent of trucks arrived between 06:00 and 09:30. Carriers invoiced waiting time after 90 minutes; in 2024 the Hamburg main site alone paid approximately EUR 38,000 in waiting fees.

What changed

- Carriers book dock slots through a link sent with the transport order. No app, no login.
- Drivers receive SMS or WhatsApp updates in German, English, Polish or Romanian when a slot moves.
- The gatehouse runs a tablet yard board for check-in and check-out.
- Dispatchers see one inbox instead of six phones.

Result

31% fewer dock wait minutes

Measured over the first three months after go-live at the Hamburg main site (March to May 2025), compared with the same months in 2024 from Nordfracht's own gate logs. Total dock wait minutes per truck fell from an average of 94 to 65 minutes.

In their words

"I do not need a yard management system. I need the drivers to stop calling me. That is what happened."

Birte Johannsen, Head of Operations, Nordfracht GmbH

Rollout

Hamburg main site live in 11 working days. Sites two and three added in Q4 2025. Nordfracht has been a Meridian customer since January 2025.
